PARTNERSHIP MEMO

United States–Australia Strategic Energy & Industrial Partnership

Where deeper industrial integration creates strategic value, through which instruments, and where to stay out

Generated from Allied Industrial Base Explorer data and a curated external evidence layer (accessed 2026-11-06); evidence, sources and caveats in the appendix. Data as of 30 October 2026.

Executive Decision Summary

BUILD TOGETHER

Permanent Magnets & Drive Systems: AC generators (US->Australia). Battery Materials & Cells: Li-ion cells & packs (US->Australia); Other accumulators (joint). Wind & Hydropower Equipment: Wind turbine generating sets (US->Australia). Grid Equipment & Conductors: Wind assembly (US->Australia). Electric Vehicles: Electric Vehicles assembly (US->Australia).

TRADE AND STANDARDS

Recognise trusted partner supply of batteries extraction (cobalt ores, lithium minerals, natural graphite); oil extraction in procurement and content rules. Bind market access for li-ion cells & packs, batteries assembly (li-ion cells & packs, other accumulators), batteries components (accumulator parts & separators), wind turbine generating sets, wind components (ac generators, ferrite & other magnets, insulators & bushings), wind assembly (electricity meters, overhead conductors, power cables), ac generators, solar assembly (electricity meters, overhead conductors, power cables). Keep nuclear special materials; transformers; uranium conversion & enrichment open to global sourcing.

INSTITUTIONS

Upgrade US-Australia Critical Minerals and Rare Earths Framework (Oct 2025): sector strategy, reciprocal commitments, a KPI dashboard and an annual review. No new MOU.

STAY OUT

Do not co-subsidise new Coal extraction capacity. Do not co-subsidise new Gas extraction capacity. Do not create a new bilateral energy MOU or a free-standing MEA institution.

Why this partnership matters.

- Of 142 technology x stage cells and electro-industrial nodes assessed for the pair, 24 show an active complementarity (a supplier meeting the other's need, a shared chokepoint, a capacity-constrained trusted supplier or a chain specialisation), 2 direct competition and 92 no strategic case. The relationship is not one of general similarity: most of the electro-industrial base needs no bilateral intervention.[1]
- AIB strategic roles: US Demand & Market Anchor (primary), Coordination / Bridge Hub (primary), Capital & Investment Anchor (primary), Scale Manufacturing & Integration Platform (secondary), Specialized Technology & Manufacturing Anchor (secondary); Australia Resource & Processing Anchor (primary).[1]

The central bilateral bargain.

- *Inference.* Australia supplies rare-earth metals, lithium minerals, uranium/fuel extraction: aggregated low-coverage sub-sectors (spent fuel & nuclear scrap, uranium ores) where the US is short; the US supplies li-ion cells & packs, wind turbine generating sets, ac generators, battery recycling feed where Australia is short; the

two share exposure to the same coercive supplier in other accumulators, where neither can supply the other and the answer is joint demand, finance and third-country capacity.

- *Inference.* From the AIB roles, the US brings demand and offtake, coordination across allied chains, capital; Australia brings resources and processing. Public finance runs through DOE LPO, DoW OSC, DFC, EXIM on the US side and EFA, NRFC, CEFC, ARENA on the Australia side. The trade is market access and demand certainty for trusted capacity.

The 5 highest-priority joint bets (tier 1 by the rules in Section 3, one per compact; ranked by urgency then importance):

PRIORITY	SECTOR	NODES IN THE BET (DIRECTION)	STRATEGIC PROBLEM	US CONTRIBUTION	AUSTRALIA CONTRIBUTION	MAIN INSTRUMENT (LEAD NODE)	TIMING
1	Permanent Magnets & Drive Systems	AC generators (US->Australia)	strategic manufacturing gap	AC generators: trusted capacity (27% of world supply); Wind components: trusted capacity (top-quarter position)	AC generators: demand and long-term offtake; Wind components: demand and long-term offtake	market access	12-24 months
2	Battery Materials & Cells	Li-ion cells & packs (US->Australia); Other accumulators (joint)	geopolitical chokepoint	Li-ion cells & packs: trusted capacity (6% of world supply); Other accumulators: its demand for pooled offtake, and finance for non-Chinese supply	Li-ion cells & packs: demand and long-term offtake; Other accumulators: its demand for pooled offtake, and finance for non-Chinese supply	anchor offtake	12-24 months
3	Wind & Hydropower Equipment	Wind turbine generating sets (US->Australia)	geopolitical chokepoint	Wind turbine generating sets: trusted capacity (7% of world supply)	Wind turbine generating sets: demand and long-term offtake	anchor offtake	12-24 months
4	Grid Equipment & Conductors	Wind assembly (US->Australia)	strategic manufacturing gap	Wind assembly: trusted capacity (top-quarter position); Solar refining: its demand for pooled offtake, and finance for non-Chinese supply	Wind assembly: demand and long-term offtake; Solar refining: its demand for pooled offtake, and finance for non-Chinese supply	market access	12-24 months
5	Electric Vehicles	Electric Vehicles assembly (US->Australia)	strategic manufacturing gap	Electric Vehicles assembly: trusted capacity (top-quarter position)	Electric Vehicles assembly: demand and long-term offtake	strategic imports	12-24 months

Sources: 1.

- *Inference.* Outside the electro-industrial compacts, the rules also find fuel-trade lanes (oil extraction); they are handled in the trade agenda, not as compacts.

Do not prioritise (Section 10):

- *Recommendation.* Do not co-subsidise new Coal extraction capacity: both are strong suppliers (US 9%, Australia 33%). Trusted supply is adequate: this is commercial competition.
- *Recommendation.* Do not co-subsidise new Gas extraction capacity: both are strong suppliers (US 12%, Australia 12%). Trusted supply is adequate: this is commercial competition.
- *Recommendation.* Do not create a new bilateral energy MOU or a free-standing MEA institution: USAU-M2 already exists (finance and projects but no published list); dock the compacts in it.

Existing mechanisms and the MEA question (Section 8):

- *Inference.* MEA assessment: **upgrade an existing framework (USAU-M2)**. Gaps: no cross-sector KPI dashboard or review cycle; USAU-M2 has no published project pipeline.
- *Recommendation.* Do not sign a new energy MOU. Give USAU-M2 a sector strategy, reciprocal commitments and a KPI dashboard covering the recommended compacts, reviewed every 12 months.

1. Current State of the Relationship

This section sets out what already exists before anything new is proposed. Facts are from the curated evidence layer (accessed 2026-11-06); items marked partial or unverified rest on secondary sources and should be confirmed before citation.

Alliance and plurilateral architecture

- Australia's memberships in OSI's economic-security agreements table: IPEF, MSP, U.S. FTA.[1]
- ASPI lists the MSP, which Korea chairs in 2025, among the frameworks for Australia-Korea minerals cooperation; Australian membership is not stated in that article.[2]
- Korea chaired the Minerals Security Partnership until June 2026; a February 2026 report says its 17 members carried into the successor FORGE; Korean public lenders joined the MSP Finance Network; no signed US-Korea critical-minerals MOU was found.[3]
- The Response Group was established in March 2026 after a Tokyo investment ministerial on 14 March; the US launched the FORGE forum in February 2026; the group's outputs and meeting record are not published in these sources.[4]
- Quad foreign ministers adopted a framework to mobilise up to $20bn for secure critical-mineral supply chains; a separate July 2025 Quad initiative is mentioned only in passing and not sourced.[5]
- Launched July 2025 and framework adopted May 2026 to mobilise up to US$20bn of public and private support for mining, processing and recycling; no project list.[6]

Trade architecture and frictions

- In the OSI energy basket, US imported US$1.3bn from Australia and Australia imported US$7.3bn from US (bilateral flows 2024, summed over the technology x stage cells).[1]
- AUSFTA is in force with a Joint Committee supervising implementation and committees on goods, agriculture and SPS; it gave no exemption from the 2025-26 US tariffs; entry-into-force date not stated on the page.[7]

Industrial and energy agreements

- Signed 20 May 2023; set up a Clean Energy Industrial Transformation forum and a ministerial Taskforce on Critical Minerals led by Industry, Science and Resources and the US NSC; no dollar amounts.[8]
- Signed 20 Oct 2025; each government to provide at least US$1bn within six months toward a US$8.5bn pipeline of priority projects in both countries; creates a Supply Security Response Group; release names no price floor.[9]
- Australia's US$3bn contribution to the US submarine industrial base funded Electric Boat's first AUKUS contract in April 2026; sources differ on how much has been paid and on whether Australia is assured a Virginia-class boat; no clean-energy supply link identified.[10]

Investment vehicle, project pipeline and financing

- At signing EXIM issued seven non-binding letters of interest totalling over US$2.2bn, including Northern Minerals, Graphinex and La Trobe Magnesium; these are preliminary and not finalised loans.[11]
- OSC announced a conditional commitment of up to US$400m for a proposed 25-year loan to Sunrise Energy Metals' Syerston scandium project in New South Wales, subject to conditions; August date approximate.[12]

Corporate relationships in the recommended compacts

- The trilateral Wagerup gallium project reportedly involves Sojitz and the Japanese government with an estimated $174M US Dept of War equity investment and groundbreaking on 2026-08-24; the equity announcement year is unclear.[13]
- Lynas said in August 2025 it was negotiating a DoD offtake for Seadrift output on commercial terms and flagged uncertainty over whether the plant would proceed.[14]
- Australia offered up to US$200m concessional equity with an offtake right and the US also takes equity with an offtake right; trilateral with Japan, which has funded 50% of costs; could supply up to 10% of world gallium.[15]
- A US$100m Australian equity investment in the Nolans project in the Northern Territory, expected to supply about 5% of world rare earths once operating; US side of financing not stated in the release.[16]
- US-based Albemarle idled its last Kemerton, Western Australia lithium hydroxide train in February 2026 after putting Train 2 on care and maintenance in 2024; Greenbushes and Wodgina stakes are unaffected.[17]
- Lynas USA signed a binding letter of intent for DoW to buy about US$96m of light and heavy rare earth oxides over four years with a US$110/kg NdPr floor, replacing the earlier Seadrift-linked arrangement; final supply terms and tonnages not stated.[18]
- Lynas has said there is significant uncertainty whether Seadrift will be built and in what form, and supplies the US from Malaysia; the March 2026 DoW deal replaced the Seadrift-linked purchase; no cancellation or construction start confirmed.[19]
- In April 2026 EXIM and EFA issued coordinated letters for up to about US$1bn for Ardea Resources' Kalgoorlie nickel project and about US$849m for Tronox's rare earths refinery; letters are not committed loans; exact date not given.[20]
- Australia's non-recourse loan to Iluka totals A$1.65bn after a A$400m top-up in May 2026, with commissioning planned mid-2027; the loan is Australian-funded and no US offtake or EXIM role was found; May date approximate.[21]
- DoW announced an estimated US$174m equity financing on 31 Aug 2026 after groundbreaking on 24 Aug; the plant is designed for 100 t a year of gallium; secondary report, DoW release not read.[22]
- Final investment decision in May 2026 after an Australian offtake commitment under the Strategic Reserve; construction began 8 Oct 2026; credit agencies from the US, Canada, Korea and Germany support it; the article's A$1.2bn figure is ambiguous.[23]
- Unverified items are left out of this section; they stay in the evidence register (evidence_register.csv) and the evidence layer.[1]
- *Inference.* Working channels today: US-Australia Critical Minerals and Rare Earths Framework (Oct 2025) (a project pipeline and finance). What the relationship lacks: no cross-sector KPI dashboard or review cycle; USAU-M2 has no published project pipeline.

2. What Each Country Is Good At — and What It Needs

Cell codes: position / need for **US · Australia**. Position S strong (top quarter of contenders and above the capability floor), M contender, W not a contender; need H high (supply-chain need >= 0.67, or deployment need >= 0.60 at Deployment), L low; - not measured. Source: strategic_position_tbl (engine choices are in country_profiles.csv).

Sources: 1.

Electro-industrial nodes where either country has a position or a need (AIB division of labour, 2024 trade; share = world export or production share; need is the node's technology x stage need, inherited, so a proxy; demand = share of allied demand). 75 of 76 nodes:

Some columns of the next table are left out of the print edition; the Markdown and CSV outputs carry them all.

Table A1 in the appendix (75 rows) carries this table in full; the CSV outputs carry every column.

- Revealed policy priority (NIPO / IEA PAMS within-country percentile; policy never enters the classification) is highest for US in: Green Hydrogen assembly (0.95); Green Hydrogen components (0.93); Nuclear components (0.92); Nuclear assembly (0.90); Batteries assembly (0.87); for Australia in: Green Hydrogen assembly (0.99); Green Hydrogen components (0.96); Solar assembly (0.92); Electric Vehicles extraction (0.90); Batteries refining (0.89).[1]
- Evidence quality: 40 of 66 cells have high stage-specific evidence for both countries; 19 units are flagged low-evidence.[1]

3. Bilateral Complementarity Map

State counts over all units: a_supplies_b_needs 9; b_supplies_a_needs 1; complementary_specialization 5; shared_vulnerability 3; capacity_constrained_trusted_supply 6; direct_competition 2; low_strategic_case 92; deployment_demand 6; not_assessed 18.[1]

Inference. Rules (Section 3 of docs/partnership_memos.md): two strong positions are **direct competition**, never complementarity; a supplier must be strong (or a contender the engine names as the other's trusted partner) and the buyer must have high need, or material demand where trusted capacity is short or a chokepoint exists; **capacity-constrained** where the AIB finds allied capacity short of demand; **shared vulnerability** where both need the node, neither supplies it and a coercive supplier holds at least half of world supply.

Some columns of the next table are left out of the print edition; the Markdown and CSV outputs carry them all.

Table A2 in the appendix (26 rows) carries this table in full; the CSV outputs carry every column.

- Low-priority / open-market nodes (67): wafers, polysilicon, synthetic graphite (anode-grade), solar cells, cathode materials & precursors, pv modules & generators, rare-earth oxides & compounds, cobalt intermediates & chemicals, natural graphite, accumulator parts & separators, lithium chemicals, battery materials (foil, electrolyte), manganese dioxide (emd), nickel intermediates & chemicals, cobalt ores, copper wire & rod, copper smelting & refining, electricity meters, overhead conductors, power cables, power electronics components, static converters & inverters, switchgear & protection, transformers, insulators & bushings, non-oriented electrical steel (ngo), automatic controllers, grain-oriented electrical steel (goes), copper ores & concentrates, wind blades & hubs, electric & plug-in cars, wind towers, rare-earth permanent

magnets, piezo-electric quartz, pv cover glass, rare-earth ores (monazite), ferrite & other magnets, refrigerants, heat pumps & ac units, solar thermal water heaters, gallium, germanium & indium, electrolysers, refrigeration & heat-pump compressors, power semiconductors, electric two-wheelers & works trucks, sensors & controller parts, electric motors, motor & generator parts, electric buses, trucks & tractors, electric furnaces & heating, furnace parts, integrated circuits, hydro turbine parts, graphite electrodes, blade core wood (balsa), uranium conversion & enrichment, nuclear reactors & enrichment machinery, aluminium wire rod, direct-reduced iron (dri/hbi), nuclear special materials, pgms (iridium, ruthenium), electric rail vehicles, semiconductor manufacturing equipment, fuel assemblies & zirconium, hydro turbines, hydrogen, ammonia & methanol, silver powder.[1]

- Deployment cells are demand context, not supply relations: high deployment need in Batteries (USA and AUS); Electric Grid (AUS); Wind (AUS); Oil (AUS); Gas (USA); Solar (AUS).[1]

4. Trade Agenda

- *Inference.* **What the US should export to Australia:** Li-ion cells & packs; Batteries assembly (li-ion cells & packs, other accumulators); Batteries components (accumulator parts & separators); Wind turbine generating sets; Wind components (ac generators, ferrite & other magnets, insulators & bushings); Wind assembly (electricity meters, overhead conductors, power cables); AC generators; Oil extraction; Solar assembly (electricity meters, overhead conductors, power cables); Electric Vehicles components (accumulator parts & separators, electric motors, ferrite & other magnets); Electric Vehicles assembly (electric & plug-in cars, electric buses, trucks & tractors, electric two-wheelers & works trucks); Electric Vehicles refining (rare-earth metals, rare-earth oxides & compounds); Battery recycling feed; Gas components; Gas refining; Reactor parts.
- *Inference.* **What Australia should export to the US:** Batteries extraction (cobalt ores, lithium minerals, natural graphite); Rare-earth metals; Lithium minerals; Electric Vehicles extraction (cobalt ores, lithium minerals, natural graphite); Uranium/fuel Extraction: aggregated low-coverage sub-sectors (Spent fuel & nuclear scrap, Uranium ores).
- *Inference.* **Where tariffs would undermine allied specialisation:** li-ion-cells-and-packs, Batteries|Assembly, Batteries|Components, wind-turbine-generating-sets, Wind|Components, Wind|Assembly, ac-generators, Solar|Assembly.
- *Inference.* **Procurement, standards and content rules to recognise mutually:** Batteries|Extraction, Oil|Extraction.
- *Inference.* **Where third-country circumvention safeguards are genuinely required:** none; elsewhere they would add cost without security.
- *Inference.* **Where unrestricted global sourcing is acceptable:** nuclear-special-materials, transformers, uranium-conversion-and-enrichment, overhead-conductors, wind-towers, aluminium-wire-rod.

Table A3 in the appendix (20 rows) carries this table in full; the CSV outputs carry every column.

- The tariff measures in force or in dispute between the two, the baseline any binding of the nodes above works from:
- After the Supreme Court struck down IEEPA tariffs on 20 Feb 2026, a 10% Section 122 surcharge applied to Australian goods from 24 Feb for 150 days and lapsed on 24 Jul 2026; AUSFTA gave no exemption.[24]
- From 24 Jul 2026 most Australian goods face a 12.5% Section 301 forced-labor tariff because Australia has no forced-labour import ban, versus 10% for economies with one; some exports reportedly exempt; one source disagrees on the band; Federal Register schedule not read.[25]
- Section 232 tariffs on steel, aluminium, copper and automobiles continued unchanged beside the Section 122 and Section 301 measures; Australia-specific rates, quotas or exemptions were not found.[26]

5. Investment Agenda

US → Australia investment (US capital and firms expanding in Australia)

Some columns of the next table are left out of the print edition; the Markdown and CSV outputs carry them all.

ID	NODE	CAPITAL / CAPABILITY OWNER	DESTINATION	DEMAND CASE	PRIVATE ACTORS (EVIDENCE)	PUBLIC INSTRUMENT	ADDITIONALITY	HORIZON
I03	Batteries assembly (li-ion cells & packs, other accumulators)	USA	AUS	supply-chain need 0.90 (USA) / 0.85 (AUS)		market access	medium	2-3 years
I04	Batteries components (accumulator parts & separators)	USA	AUS	supply-chain need 0.06 (USA) / 0.72 (AUS)		market access	medium	2-3 years
I05	Wind components (ac generators, ferrite & other magnets, insulators & bushings)	USA	AUS	supply-chain need 0.27 (USA) / 0.92 (AUS)		market access	medium	2-3 years
I06	Wind assembly (electricity meters, overhead conductors, power cables)	USA	AUS	supply-chain need 0.33 (USA) / 0.83 (AUS)		market access	medium	2-3 years
I07	AC generators	USA	AUS	AUS takes 4% of allied demand (4% of allied net imports); AIB class LOW INTERVENTION		market access	medium	2-3 years
I08	Solar assembly (electricity meters, overhead conductors, power cables)	USA	AUS	supply-chain need 0.20 (USA) / 0.81 (AUS)		market access	medium	2-3 years
I09	Electric Vehicles components (accumulator parts & separators, electric motors, ferrite & other magnets)	USA	AUS	supply-chain need 0.73 (USA) / 0.76 (AUS)		market access	medium	2-3 years
I10	Electric Vehicles assembly (electric & plug-in cars, electric buses, trucks & tractors, electric two-wheelers & works trucks)	USA	AUS	supply-chain need 0.15 (USA) / 0.70 (AUS)		export credit	medium	2-3 years

Sources: 1.

Australia → US investment (Australia capital and firms expanding in US)

Some columns of the next table are left out of the print edition; the Markdown and CSV outputs carry them all.

ID	NODE	CAPITAL / CAPABILITY OWNER	DESTINATION	DEMAND CASE	PRIVATE ACTORS (EVIDENCE)	PUBLIC INSTRUMENT	ADDITIONALITY	HORIZON
I01	Oil extraction	AUS	USA	supply-chain need 0.47 (USA) / 0.83 (AUS)		anchor offtake	medium	2-3 years
I02	Rare-earth metals	AUS	USA	USA takes 1% of allied demand (0% of allied net imports); AIB class BUILD	Lynas	standards alignment	low	2-3 years

Sources: 1.

Joint investment (at home or in third countries)

Some columns of the next table are left out of the print edition; the Markdown and CSV outputs carry them all.

ID	NODE	CAPITAL / CAPABILITY OWNER	DESTINATION	DEMAND CASE	PRIVATE ACTORS (EVIDENCE)	PUBLIC INSTRUMENT	ADDITIONALITY	HORIZON
I11	Li-ion cells & packs	USA+AUS	third countries (POL; HUN) and either partner	AUS takes 3% of allied demand (3% of allied net imports); AIB class BUILD		anchor offtake	medium	2-3 years
I12	Batteries extraction (cobalt ores, lithium minerals, natural graphite)	USA+AUS	third countries (CHL; ARG; BRA) and either partner	supply-chain need 0.81 (USA) / 0.12 (AUS)		anchor offtake	high	2-3 years
I13	Wind turbine generating sets	USA+AUS	third countries (ESP; DNK) and either partner	AUS takes 3% of allied demand (3% of allied net imports); AIB class BUILD		anchor offtake	high	2-3 years
I14	Electric Vehicles refining (rare-earth metals, rare-earth oxides & compounds)	USA+AUS	third countries (THA; MYS; JPN) and either partner	supply-chain need 0.90 (USA) / 0.86 (AUS)	Lynas; Department of War; Lynas Rare Earths	anchor offtake	low	2-3 years
I15	Electric Vehicles extraction (cobalt ores, lithium minerals, natural graphite)	USA+AUS	third countries (CHL; ARG; BRA) and either partner	supply-chain need 0.82 (USA) / 0.72 (AUS)	Arafura; Arafura Rare Earths	anchor offtake	low	2-3 years

Sources: 1.

- *Inference.* Additionality = mean of three named components: the market failure (chokepoint 1, capacity constraint 0.75, gap or emerging bottleneck 0.5, none 0), one minus an existing commitment in the evidence layer (committed 1, announced 0.5) and one minus a working market (the buyer already takes 30% or more of its imports from the supplier). It is **low** whenever there is no failure or the investment is already committed: public support would then not be additional.

6. Third-Country and Development Cooperation

- From the development-partnership pairs (scripts/93: a donor's need meets a developing economy's credible Catch Up pathway in the same step), US and Australia are both donors at 10 recipient steps. Ranked: both donors' own need first, then steps inside a recommended compact.[1]
- *Inference.* Roles: US brings demand and offtake and coordination across compacts; Australia brings resources and processing (AIB strategic roles).

Some columns of the next table are left out of the print edition; the Markdown and CSV outputs carry them all.

ID	RECIPIENT	TECHNOLOGY	STAGE	COMPACT	RECIPIENT CHOICE	RECIPIENT ANCHOR	US INTEREST	AUSTRALIA INTEREST

Sources: 1.

- The trilateral Wagerup gallium project reportedly involves Sojitz and the Japanese government with an estimated $174M US Dept of War equity investment and groundbreaking on 2026-08-24; the equity announcement year is unclear.[13]
- Australia offered up to US$200m concessional equity with an offtake right and the US also takes equity with an offtake right; trilateral with Japan, which has funded 50% of costs; could supply up to 10% of world gallium.[15]
- ASPI lists the MSP, which Korea chairs in 2025, among the frameworks for Australia-Korea minerals cooperation; Australian membership is not stated in that article.[2]
- Korea chaired the Minerals Security Partnership until June 2026; a February 2026 report says its 17 members carried into the successor FORGE; Korean public lenders joined the MSP Finance Network; no signed US-Korea critical-minerals MOU was found.[3]
- Quad foreign ministers adopted a framework to mobilise up to $20bn for secure critical-mineral supply chains; a separate July 2025 Quad initiative is mentioned only in passing and not sourced.[5]
- Launched July 2025 and framework adopted May 2026 to mobilise up to US$20bn of public and private support for mining, processing and recycling; no project list.[6]
- Final investment decision in May 2026 after an Australian offtake commitment under the Strategic Reserve; construction began 8 Oct 2026; credit agencies from the US, Canada, Korea and Germany support it; the article's A$1.2bn figure is ambiguous.[23]
- The NRC released a final environmental impact statement for GLE's Paducah, Kentucky laser enrichment plant, majority owned by Australian-listed Silex, with a DOE agreement to re-enrich depleted tails; no construction start or Australian government finance shown.[27]

7. Recommended Sectoral Compacts

Inference. 3 compacts pass (rule: at least one joint bet, at least two active nodes and both countries holding an AIB compact role; or, labelled **evidence-led**, an existing bilateral pipeline or at least 2 bilateral project items where OSI measures a need but cannot see the partner's capability). The hypothesis test for every AIB compact:

Some columns of the next table are left out of the print edition; the Markdown and CSV outputs carry them all.

RANK	COMPACT	VERDICT	JOINT BETS	COORDINATE	US ROLE	AUSTRALIA ROLE	BILATERAL MECHANISMS	RECOMMENDED
1	Battery Materials & Cells	bilateral priority	2	2	Resource supplier	Resource supplier	USJ-QUAD; USAU-M2	TRUE
2	Permanent Magnets & Drive Systems	bilateral priority	1	1	Scale manufacturer	Processing anchor	USJ-QUAD; USAU-M2; USAU-M5	TRUE
3	Semiconductors & Power Electronics	evidence-led candidate	0	0	Specialized technology supplier		USAU-M2	TRUE
4	Wind & Hydropower Equipment	secondary	1	0	Demand anchor	Bridge / coordination partner		FALSE
5	Nuclear Fuel & Reactor Systems	secondary	0	2	Specialized technology supplier	Resource supplier		FALSE
6	Electric Vehicles	not a bilateral priority	0	0	Scale manufacturer	Bridge / coordination partner		FALSE
7	Grid Equipment & Conductors	not a bilateral priority	0	0	Demand anchor			FALSE
8	Heat Pumps & Cooling	not a bilateral priority	0	0	Processing anchor			FALSE
9	Industrial Electrification & Hydrogen	not a bilateral priority	0	0	Demand anchor			FALSE
10	Solar Manufacturing	not a bilateral priority	0	0	Demand anchor			FALSE

Sources: 1.

1. Battery Materials & Cells

Strategic objective

- AIB mission: Build missing capacity in Li-ion cells & packs and lithium chemicals and manganese dioxide (EMD) (refined chemicals); targeted: preserve and second-source specialized production in lithium chemicals (refined chemicals)..[1]
- *Recommendation.* Change the outcome at li-ion cells & packs, other accumulators, lithium minerals: geopolitical chokepoint; trusted partner capacity constraint; strategic manufacturing gap.

Why this pair?

- *Inference.* Li-ion cells & packs: Capacity-constrained trusted supply (USA is a capable trusted supplier, the other side needs the node, and allied capacity is short of demand). Other accumulators: Shared vulnerability (both need the node and both import heavily from coercive suppliers). Lithium minerals: Complementary specialisation (AUS is strong here and the other country is strong at another step of the same chain). Battery recycling feed: Complementary specialisation (USA is strong here and the other country is strong at another step of the same chain).

- AIB compact roles: US Resource supplier (lead node battery-recycling-feed); Australia Resource supplier (lead node lithium-minerals).[1]

Supply-chain architecture

STAGE	UNIT	BASIS	US POSITION	AUSTRALIA POSITION	DESIRED BILATERAL ARRANGEMENT	TREATMENT	INSTRUMENT
Extraction	lithium-minerals	AIB node	moderate	strong	complementary specialization	COORDINATE	standards alignment
Refining	lithium-chemicals	AIB node	moderate	moderate	low strategic case	LOW INTERVENTION	
Components	accumulator-parts-and-separators	AIB node	moderate	weak	low strategic case	LOW INTERVENTION	
Assembly	li-ion-cells-and-packs	AIB node	moderate	weak	capacity constrained trusted supply	BUILD	anchor offtake
Deployment	Batteries/Deployment	OSI cell (no AIB node at this stage)	strong	strong	deployment demand	DEMAND CONTEXT	
Recovery	battery-recycling-feed	AIB node	strong	weak	complementary specialization	COORDINATE	standards alignment

Sources: 1.

Reciprocal bargain

- US provides: supply of li-ion cells & packs, battery recycling feed; long-term demand and offtake for lithium minerals; procurement recognition of the partner as trusted supply; finance for the compact's nodes (DOE LPO, DoW OSC, DFC, EXIM).
- Australia provides: capacity and technology in lithium minerals; long-term demand for li-ion cells & packs, battery recycling feed; procurement recognition of the partner as trusted supply; finance for capacity in the partner market (EFA, NRFC, CEFC, ARENA).
- Jointly: pooled offtake and finance for non-coercive other accumulators.
- Third-country partners needed: POL, HUN, JPN, VNM, CHL, ARG, BRA, DEU.
- Better placed than this pair (largest trusted supplier once China is removed, AIB): POL at li-ion cells & packs; VNM at other accumulators; DEU at synthetic graphite (anode-grade); KOR at cathode materials & precursors; FIN at cobalt intermediates & chemicals; MDG at natural graphite; KOR at accumulator parts & separators; CHL at lithium chemicals; TWN at battery materials (foil, electrolyte); JPN at manganese dioxide (emd). The bilateral compact should not try to replace them there.[1]

Policy instruments (minimum necessary)

- *Recommendation.* anchor_offtake for li-ion cells & packs; anchor_offtake for other accumulators; standards_alignment for lithium minerals; standards_alignment for battery recycling feed

Priority transactions

- *Recommendation.* Long-term offtake by US buyers for Australia batteries extraction (cobalt ores, lithium minerals, natural graphite), sized to underwrite new capacity (candidate hosts: CHL, ARG, BRA) (D01).

Success by 2030

- Li-ion cells & packs: coercive share of supply to the two buyers below 50% (CHN now holds 84% of world supply); US's share of Australia's imports up from 30%.

- Other accumulators: allied residual gap under the China shock closed (now 18% of allied demand).
- Lithium minerals: allied residual gap under the China shock closed (now 9% of allied demand); Australia's share of US's imports up from 3%.
- Battery recycling feed: allied residual gap under the China shock closed (now 8% of allied demand); US's share of Australia's imports up from 7%.
- The AIB node class moves from BUILD to COORDINATE or LOW INTERVENTION on the next run.

Failure / exit conditions

- No signed offtake or financing within 24 months of launch: drop the node from the compact.
- The coercive share of world supply falls below the chokepoint line, or the AIB class turns LOW INTERVENTION: move to open-market treatment.
- Projects proceed on commercial terms without public support: stop the support (it is not additional).

Evidence (external)

- The 50,000 t/yr Kwinana refinery moved into production in October 2025 and is preparing samples for customer qualification; no US offtake or US investor was found for it or for other Australian lithium chemical plants.[28]
- US-based Albemarle idled its last Kemerton, Western Australia lithium hydroxide train in February 2026 after putting Train 2 on care and maintenance in 2024; Greenbushes and Wodgina stakes are unaffected.[17]

2. Permanent Magnets & Drive Systems

Strategic objective

- AIB mission: Build missing capacity in rare-earth permanent magnets (magnets & core steel)..[1]
- *Recommendation.* Change the outcome at ac generators, rare-earth metals: strategic manufacturing gap; geopolitical chokepoint.

Why this pair?

- *Inference.* AC generators: US supplies / Australia needs (USA is a capable trusted supplier and the other side needs the node). Rare-earth metals: Complementary specialisation (AUS is strong here and the other country is strong at another step of the same chain).
- AIB compact roles: US Scale manufacturer (lead node ac-generators); Australia Processing anchor (lead node rare-earth-metals).[1]

Supply-chain architecture

STAGE	UNIT	BASIS	US POSITION	AUSTRALIA POSITION	DESIRED BILATERAL ARRANGEMENT	TREATMENT	INSTRUMENT
Extraction	rare-earth-ores-monazite	AIB node	moderate	moderate	low strategic case	LOW INTERVENTION	
Refining	rare-earth-metals	AIB node	moderate	strong	complementary specialization	COORDINATE	standards alignment
Components	rare-earth-permanent-magnets	AIB node	moderate	weak	low strategic case	LOW INTERVENTION	
Assembly	ac-generators	AIB node	strong	weak	a supplies b needs	COORDINATE	market access

STAGE	UNIT	BASIS	US POSITION	AUSTRALIA POSITION	DESIRED BILATERAL ARRANGEMENT	TREATMENT	INSTRUMENT
Deployment	Electric Vehicles/Deployment	OSI cell (no AIB node at this stage)	strong	strong	low strategic case	LOW INTERVENTION	
Recovery	Electric Vehicles/Recovery	OSI cell (no AIB node at this stage)	not measured	not measured	not assessed	INSUFFICIENT DATA	

Sources: 1.

Reciprocal bargain

- US provides: supply of ac generators; long-term demand and offtake for rare-earth metals; procurement recognition of the partner as trusted supply; finance for the compact's nodes (DOE LPO, DoW OSC, DFC, EXIM).
- Australia provides: capacity and technology in rare-earth metals; long-term demand for ac generators; procurement recognition of the partner as trusted supply; finance for capacity in the partner market (EFA, NRFC, CEFC, ARENA).
- Jointly: common specifications and qualification.
- Third-country partners needed: THA, MYS.
- Better placed than this pair (largest trusted supplier once China is removed, AIB): MYS at rare-earth oxides & compounds; DEU at non-oriented electrical steel (ngo); JPN at rare-earth permanent magnets; DEU at ferrite & other magnets; DEU at electric motors; DEU at motor & generator parts. The bilateral compact should not try to replace them there.[1]

Policy instruments (minimum necessary)

- *Recommendation.* market_access for ac generators; standards_alignment for rare-earth metals

Priority transactions

- *Recommendation.* Tariff binding for US wind components (ac generators, ferrite & other magnets, insulators & bushings) entering Australia (D04).

Success by 2030

- AC generators: allied residual gap under the China shock closed (now 4% of allied demand); US's share of Australia's imports up from 15%.
- Rare-earth metals: coercive share of supply to the two buyers below 50% (CHN now holds 84% of world supply); Australia's share of US's imports up from 0%.
- The AIB node class moves from BUILD to COORDINATE or LOW INTERVENTION on the next run.

Failure / exit conditions

- No signed offtake or financing within 24 months of launch: drop the node from the compact.
- The coercive share of world supply falls below the chokepoint line, or the AIB class turns LOW INTERVENTION: move to open-market treatment.
- Projects proceed on commercial terms without public support: stop the support (it is not additional).

Evidence (external)

- Lynas said in August 2025 it was negotiating a DoD offtake for Seadrift output on commercial terms and flagged uncertainty over whether the plant would proceed.[14]
- Trump and Albanese signed a framework in October 2025 with a priority pipeline of about US$8.5B and a joint Supply Security Response Group; Japan is not a party.[29]

- A US$100m Australian equity investment in the Nolans project in the Northern Territory, expected to supply about 5% of world rare earths once operating; US side of financing not stated in the release.[16]
- Lynas USA signed a binding letter of intent for DoW to buy about US$96m of light and heavy rare earth oxides over four years with a US$110/kg NdPr floor, replacing the earlier Seadrift-linked arrangement; final supply terms and tonnages not stated.[18]
- Lynas has said there is significant uncertainty whether Seadrift will be built and in what form, and supplies the US from Malaysia; the March 2026 DoW deal replaced the Seadrift-linked purchase; no cancellation or construction start confirmed.[19]
- In April 2026 EXIM and EFA issued coordinated letters for up to about US$1bn for Ardea Resources' Kalgoorlie nickel project and about US$849m for Tronox's rare earths refinery; letters are not committed loans; exact date not given.[20]
- Australia's non-recourse loan to Iluka totals A$1.65bn after a A$400m top-up in May 2026, with commissioning planned mid-2027; the loan is Australian-funded and no US offtake or EXIM role was found; May date approximate.[21]
- Final investment decision in May 2026 after an Australian offtake commitment under the Strategic Reserve; construction began 8 Oct 2026; credit agencies from the US, Canada, Korea and Germany support it; the article's A$1.2bn figure is ambiguous.[23]

3. Semiconductors & Power Electronics (evidence-led)

- *Inference.* **Basis: external evidence.** OSI trade data show no bilateral complementarity at this compact's nodes (Australia world share: power electronics components 0.0%, static converters & inverters 0.1%, automatic controllers 0.2%, piezo-electric quartz 0.0%, gallium, germanium & indium 0.0%, power semiconductors 0.0%, sensors & controller parts 0.0%, integrated circuits 0.0%, semiconductor manufacturing equipment 0.0%); the case rests on the bilateral pipeline and corporate evidence listed at the end of this compact.
- Need that OSI does measure in the compact: power electronics components (US high 0.73, 18% of allied demand; Australia low (cell 0.92; not a material buyer)); static converters & inverters (US demand 0.28, 22% of allied demand; Australia low (cell 0.81; not a material buyer)); piezo-electric quartz (US demand n/a, 16% of allied demand; Australia not_measured n/a); gallium, germanium & indium (US demand n/a, 42% of allied demand; Australia not_measured n/a); power semiconductors (US demand 0.32, 9% of allied demand; Australia low 0.56).[1]

Strategic objective

- AIB mission: Monitor: no intervention class reaches the materiality floor (25% of the compact's supply to shift or US$1bn); targeted: build missing capacity in piezo-electric quartz (semiconductor materials); preserve and second-source specialized production in piezo-electric quartz (semiconductor materials)..[1]
- *Recommendation.* Use USAU-M2 to tie the announced projects to the nodes where OSI measures need, and verify the partner capability that trade data cannot see (ownership abroad, domestic sales, heavy components) before any public finance is added.

Why this pair?

- *Inference.* No OSI-observed complementarity; see the evidence below.
- AIB compact roles: US Specialized technology supplier (lead node semiconductor-manufacturing-equipment); Australia NA (lead node NA).[1]

Supply-chain architecture

STAGE	UNIT	BASIS	US POSITION	AUSTRALIA POSITION	DESIRED BILATERAL ARRANGEMENT	TREATMENT	INSTRUMENT
Extraction	Electric Grid/Extraction	OSI cell (no AIB node at this stage)	moderate	weak	low strategic case	LOW INTERVENTION	
Refining	gallium-germanium-and-indium	AIB node	moderate	weak	low strategic case	LOW INTERVENTION	
Components	power-electronics-components	AIB node	moderate	weak	low strategic case	LOW INTERVENTION	
Assembly	static-converters-and-inverters	AIB node	moderate	weak	low strategic case	LOW INTERVENTION	
Deployment	Electric Grid/Deployment	OSI cell (no AIB node at this stage)	not measured	not measured	deployment demand	DEMAND CONTEXT	
Recovery	Electric Grid/Recovery	OSI cell (no AIB node at this stage)	not measured	not measured	not assessed	INSUFFICIENT DATA	

Sources: 1.

Reciprocal bargain

- US provides: procurement recognition of the partner as trusted supply; finance for the compact's nodes (DOE LPO, DoW OSC, DFC, EXIM).
- Australia provides: procurement recognition of the partner as trusted supply; finance for capacity in the partner market (EFA, NRFC, CEFC, ARENA).
- Jointly: common specifications and qualification.
- Third-country partners needed: none identified by the AIB host model.
- Better placed than this pair (largest trusted supplier once China is removed, AIB): DEU at power electronics components; DEU at static converters & inverters; PHL at piezo-electric quartz; BRA at gallium, germanium & indium; MYS at power semiconductors. The bilateral compact should not try to replace them there.[1]

Policy instruments (minimum necessary)

- *Recommendation.* Use the existing investment vehicle; no new instrument.

Priority transactions

- See Section 9; no OSI-ranked deal in this compact.

Success by 2030

- Projects in the pipeline reach final investment decision with partner-made equipment in the bill of materials.
- The AIB node class moves from BUILD to COORDINATE or LOW INTERVENTION on the next run.

Failure / exit conditions

- No signed offtake or financing within 24 months of launch: drop the node from the compact.
- The coercive share of world supply falls below the chokepoint line, or the AIB class turns LOW INTERVENTION: move to open-market treatment.
- Projects proceed on commercial terms without public support: stop the support (it is not additional).

Evidence (external)

- The trilateral Wagerup gallium project reportedly involves Sojitz and the Japanese government with an estimated $174M US Dept of War equity investment and groundbreaking on 2026-08-24; the equity announcement year is unclear.[13]
- Australia offered up to US$200m concessional equity with an offtake right and the US also takes equity with an offtake right; trilateral with Japan, which has funded 50% of costs; could supply up to 10% of world gallium.[15]
- DoW announced an estimated US$174m equity financing on 31 Aug 2026 after groundbreaking on 24 Aug; the plant is designed for 100 t a year of gallium; secondary report, DoW release not read.[22]

8. Master Energy Agreement Assessment

- *Inference.* Rule: **existing** if every recommended compact is covered by a mechanism with both a pipeline and finance and a cross-sector mechanism has KPIs and a review cycle; **upgrade** if at least 50% of compacts are covered by a mechanism with finance or a pipeline, or a cross-sector mechanism with a pipeline exists; **new MEA** otherwise.
- *Inference.* Result: **upgrade**; coverage 100% of recommended compacts; cross-sector mechanism with KPIs and review: no.

COMPACT	ANY MECHANISM	FINANCE OR PIPELINE	PIPELINE AND FINANCE
SC-BATTERIES	TRUE	TRUE	FALSE
SC-MAGNETS	TRUE	TRUE	FALSE
SC-SEMIS	TRUE	TRUE	FALSE

Recommended: upgrade US-Australia Critical Minerals and Rare Earths Framework (Oct 2025) into the execution framework for the compacts

- **Scope:** Battery Materials & Cells; Permanent Magnets & Drive Systems; Semiconductors & Power Electronics; no other sectors.
- **Reciprocal commitments:** US commits demand certainty (procurement recognition and anchor offtake) and market-access predictability for the nodes Australia supplies (rare-earth metals, lithium minerals); Australia commits the same for the nodes US supplies (li-ion cells & packs, ac generators, battery recycling feed). Each commits public finance for the compact nodes, at home, in the partner or with named third-country hosts.
- **Compact portfolio:** Battery Materials & Cells (bilateral priority); Permanent Magnets & Drive Systems (bilateral priority); Semiconductors & Power Electronics (evidence-led candidate).
- **Financing lanes:** US: DOE LPO, DoW OSC, DFC, EXIM; Australia: EFA, NRFC, CEFC, ARENA; demand-side tools (offtake, stockpiles, procurement): DOE, DoW OSC, DLA and DFAT, DCCEEW, FIRB; third-country finance: DFC and none listed.
- **Governance:** one bilateral steering line inside US-Australia Critical Minerals and Rare Earths Framework (Oct 2025), with the existing sector mechanisms running their workstreams (Climate, Critical Minerals and Clean Energy Transformation Compact (2023)). Projects are selected by a joint committee, not by one side.
- **Milestones:** the 12-month milestones of the deal pipeline (Section 9).
- **KPI dashboard:** per compact node, the coercive share of each country's supply, the bilateral import share, offtake signed (volume), capacity at FID and operating, and public money committed vs private.
- **Review cycle:** every 12 months, with the OSI tables re-run on new trade data.
- **Sunset / exit:** each compact carries the exit conditions in Section 7; the framework expires with the investment vehicle () unless renewed on evidence.

9. 12–36 Month Deal Pipeline

Inference. Ranked lexicographically on separate fields (importance, then additionality, urgency, tractability, execution speed, value-chain interdependency, evidence quality); urgency is not importance. At most two deals per compact.

Some columns of the next table are left out of the print edition; the Markdown and CSV outputs carry them all.

RANK	DEAL / ACTION	COMPACT	INSTRUMENT	RESPONSIBLE INSTITUTIONS	12M MILESTONE	IMPORTANCE	URGENCY	ADDITIONALITY
1	Long-term offtake by US buyers for Australia batteries extraction (cobalt ores, lithium minerals, natural graphite), sized to underwrite new capacity (candidate hosts: CHL, ARG, BRA)	SC-BATTERIES	anchor offtake	USA: DOE, DoW OSC, DLA; AUS: DCCEEW	Signed long-term offtake from at least one large buyer	high	high	high
2	Long-term offtake by Australia buyers for US wind turbine generating sets, sized to underwrite new capacity (candidate hosts: ESP, DNK)	SC-WIND	anchor offtake	USA: DOE, DoW OSC, DLA; AUS: DCCEEW	Signed long-term offtake from at least one large buyer	high	high	high
3	Long-term offtake by US and Australia buyers for non-coercive solar refining (copper wire & rod, polysilicon), sized to underwrite new capacity (candidate hosts: MYS, JPN, DEU)	SC-GRID	anchor offtake	USA: DOE, DoW OSC, DLA; AUS: DCCEEW	Signed long-term offtake from at least one large buyer	high	medium	high

7	Multi-year supply agreements for US electric vehicles assembly (electric & plug-in cars, electric buses, trucks & tractors, electric two-wheelers & works trucks) into Australia buyers	SC-EV	strategic imports	USA: USTR, Commerce; AUS: DISR, DFAT	Named import lanes and volumes agreed between buyers and the supplier's producers	high	low	medium

Sources: 1.

10. What Not to Do

- *Recommendation.* **N01** Do not co-subsidise new Coal extraction capacity: both are strong suppliers (US 9%, Australia 33%). Trusted supply is adequate: this is commercial competition.
- *Recommendation.* **N02** Do not co-subsidise new Gas extraction capacity: both are strong suppliers (US 12%, Australia 12%). Trusted supply is adequate: this is commercial competition.
- *Recommendation.* **N03** Do not create a new bilateral energy MOU or a free-standing MEA institution: USAU-M2 already exists (finance and projects but no published list); dock the compacts in it.
- *Recommendation.* **N04** Do not put new public money behind Electric Vehicles extraction (cobalt ores, lithium minerals, natural graphite) investment that is already committed (evidence USAU-08; USAU-09); support is additional only beyond it.
- *Recommendation.* **N05** Do not put new public money behind Electric Vehicles refining (rare-earth metals, rare-earth oxides & compounds) investment that is already committed (evidence E32; UJ-030; UJ-044; USAU-11; USAU-13; USAU-14; USAU-15); support is additional only beyond it.
- *Recommendation.* **N06** Do not put new public money behind Rare-earth metals investment that is already committed (evidence E32); support is additional only beyond it.

11. Evidence Register

- Every recommendation (IDs J, C, T, I, X, D, N, M) has rows in evidence_register.csv: the OSI metrics behind it (variable, value for each country, year, source, evidence specificity) and any external items, with URL and access date. Recommendations that rest on external research only carry basis = external.[1]
- External evidence vintage: accessed 2026-11-06; 256 items (partial 197, unverified 18, verified 41).[1]

Where the findings are weak or counterintuitive

- Joint bets resting on a node need inherited from its cell (a proxy): AC generators; Li-ion cells & packs; Wind turbine generating sets.

- Evidence-led compacts (OSI cannot see the partner's capability in trade data): Semiconductors & Power Electronics.
- Australia has no listed trade position (under 1% of world supply) at nodes where the US has material demand: li-ion cells & packs, other accumulators, synthetic graphite (anode-grade), solar cells, pv modules & generators, rare-earth oxides & compounds, natural graphite, accumulator parts & separators, battery materials (foil, electrolyte), manganese dioxide (emd), copper wire & rod, electricity meters, overhead conductors, power cables, power electronics components, static converters & inverters, switchgear & protection, transformers, insulators & bushings, wind blades & hubs, electric & plug-in cars, wind towers, rare-earth permanent magnets, piezo-electric quartz, pv cover glass, ferrite & other magnets, heat pumps & ac units, solar thermal water heaters, gallium, germanium & indium, electrolysers, refrigeration & heat-pump compressors, power semiconductors, electric two-wheelers & works trucks, electric motors, motor & generator parts, electric furnaces & heating, furnace parts, hydro turbine parts, graphite electrodes, blade core wood (balsa), nuclear reactors & enrichment machinery, aluminium wire rod, direct-reduced iron (dri/hbi), nuclear special materials, pgms (iridium, ruthenium). Trade data miss capability that is owned abroad or sold at home, so these nodes cannot show complementarity even where corporate evidence suggests it.
- Low-evidence units among the active states: uranium-fuel-upstream--aggregated.
- Fuel-trade lanes reach tier 1 (oil extraction; buyer: Australia): real energy-security lanes, but outside the electro-industrial compacts and with no market failure beyond the supply concentration the engine measures.

Table A3. Section 4, Trade Agenda

ID	DIRECTION	UNIT	ACTION TYPE	ACTION
T01	USA -> AUS	li-ion-cells-and-packs	tariff risk	Bind market access for US Li-ion cells & packs into Australia: Australia's protection priority on this node is in its top third (0.78), which taxes the trusted supplier it needs.
T02	both	other-accumulators	common standards	Common specifications for Other accumulators so a joint supplier base can serve both markets.
T03	AUS -> USA	Batteries/Extraction	procurement recognition	Recognise Australia output of Batteries extraction (cobalt ores, lithium minerals, natural graphite) as trusted domestic-equivalent supply in US procurement and content rules; capacity, not access, is the constraint.
T04	USA -> AUS	Batteries/Assembly	tariff risk	Bind market access for US Batteries assembly (li-ion cells & packs, other accumulators) into Australia: Australia's protection priority on this node is in its top third (0.78), which taxes the trusted supplier it needs.
T05	USA -> AUS	Batteries/Components	tariff risk	Bind market access for US Batteries components (accumulator parts & separators) into Australia: Australia's protection priority on this node is in its top third (0.83), which taxes the trusted supplier it needs.
T06	USA -> AUS	wind-turbine-generating-sets	tariff risk	Bind market access for US Wind turbine generating sets into Australia: Australia's protection priority on this node is in its top third (0.96), which taxes the trusted supplier it needs.
T07	USA -> AUS	Wind/Components	tariff risk	Bind market access for US Wind components (ac generators, ferrite & other magnets, insulators & bushings) into Australia: Australia's protection priority on this node is in its top third (0.68), which taxes the trusted supplier it needs.
T08	USA -> AUS	Wind/Assembly	tariff risk	Bind market access for US Wind assembly (electricity meters, overhead conductors, power cables) into Australia: Australia's protection priority on this node is in its top third (0.96), which taxes the trusted supplier it needs.
T09	USA -> AUS	ac-generators	tariff risk	Bind market access for US AC generators into Australia: Australia's protection priority on this node is in its top third (0.81), which taxes the trusted supplier it needs.
T10	USA -> AUS	Oil/Extraction	procurement recognition	Recognise US output of Oil extraction as trusted domestic-equivalent supply in Australia procurement and content rules; capacity, not access, is the constraint.
T11	both	Solar/Refining	common standards	Common specifications for Solar refining (copper wire & rod, polysilicon) so a joint supplier base can serve both markets.
T12	USA -> AUS	Solar/Assembly	tariff risk	Bind market access for US Solar assembly (electricity meters, overhead conductors, power cables) into Australia: Australia's protection priority on this node is in its top third (0.94), which taxes the trusted supplier it needs.
T13	open	nuclear-special-materials	open sourcing	Leave Nuclear special materials open to global sourcing: trusted supply is adequate and diversified, so a bilateral preference adds cost without security.
T14	open	transformers	open sourcing	Leave Transformers open to global sourcing: trusted supply is adequate and diversified, so a bilateral preference adds cost without security.
T15	open	uranium-conversion-and-enrichment	open sourcing	Leave Uranium conversion & enrichment open to global sourcing: trusted supply is adequate and diversified, so a bilateral preference adds cost without security.
T16	open	overhead-conductors	open sourcing	Leave Overhead conductors open to global sourcing: trusted supply is adequate and diversified, so a bilateral preference adds cost without security.

ID	DIRECTION	UNIT	ACTION TYPE	ACTION
T17	open	wind-towers	open sourcing	Leave Wind towers open to global sourcing: trusted supply is adequate and diversified, so a bilateral preference adds cost without security.
T18	open	aluminium-wire-rod	open sourcing	Leave Aluminium wire rod open to global sourcing: trusted supply is adequate and diversified, so a bilateral preference adds cost without security.
T19	both	Gas/Extraction	no preference	No bilateral preference for Gas extraction: both are strong suppliers; keep the market contestable.
T20	both	Coal/Extraction	no preference	No bilateral preference for Coal extraction: both are strong suppliers; keep the market contestable.
